

IN THE CLAIMS:

Please cancel Claims 63, 64, 70, 71, 77, and 78, without prejudice to or disclaimer of the subject matter recited therein. Please amend Claims 59, 66, and 73, as follows.

1-58. (Canceled)

59. (Currently Amended) A facsimile apparatus comprising:

a recording unit which is capable of printing a received facsimile image by selectively using a first unit for color image printing and a second unit for high-quality color image printing; and

a control unit adapted to control the recording unit to print a received color facsimile image not by the second unit, but by the first unit,

wherein either one of the first unit and second unit is selectively loaded to the recording unit and wherein the control unit controls the facsimile to store a received facsimile image in a storage unit if the second unit has been loaded to the recording unit.

60. (Previously Presented) The facsimile apparatus according to claim 59, wherein the first unit comprises a plurality of containers respectively containing cyan, magenta, and yellow printing agents, and the second unit comprises a plurality of containers respectively containing high-quality cyan, magenta, and yellow printing agents,

suitable for high-quality image printing, which differ in density from the printing agents contained in the first unit.

61. (Previously Presented) The facsimile apparatus according to claim 60, wherein the printing agents and high-quality printing agents are inks.

62. (Previously Presented) The facsimile apparatus according to claim 60, wherein the first unit further comprises a container containing black printing agents and the second unit further comprises a container containing high-quality black printing agents, suitable for high-quality image printing, which differ in density from the black printing agent contained in the first unit.

63. (Cancel)

64. (Cancel)

65. (Previously Presented) The facsimile apparatus according to claim 60, wherein the first unit is capable of printing by using process black, and wherein the control unit uses the first unit for printing a received monochrome facsimile image and controls the first unit to print the received monochrome facsimile image by using process black.

66. (Currently Amended) A method of controlling a facsimile apparatus, the method comprising the steps of:

printing a received facsimile image by selectively using a first unit for color image printing and a second unit for high-quality color image printing; ~~and~~

controlling the facsimile apparatus to print, in the printing step, a received color facsimile image not by the second unit, but by the first unit;

selectively loading either one of the first unit and second unit to the facsimile apparatus; and

storing a received facsimile image in a storage unit if the second unit has been loaded to the facsimile apparatus.

67. (Previously Presented) A method according to claim 66, wherein the first unit comprises a plurality of containers respectively containing cyan, magenta, and yellow printing agents, and the second unit comprises a plurality of containers respectively containing high-quality cyan, magenta, and yellow printing agents, suitable for high-quality image printing, which differ in density from the printing agents contained in the first unit.

68. (Previously Presented) A method according to claim 67, wherein the printing agents and high-quality printing agents are inks.

69. (Previously Presented) A method according to claim 67, wherein, in the printing step, the first unit includes a container containing black printing agent and the

second unit includes a container containing high-quality black printing agents, suitable for high-quality image printing, which differ in density from the black printing agent contained in the first unit.

70. (Cancel)

71. (Cancel)

72. (Previously Presented) A method according to claim 67, wherein the first unit is capable of printing by using process black, and wherein the printing step uses the first unit for printing a received monochrome facsimile image, using process black.

73. (Currently Amended) A computer program comprising computer code for controlling a facsimile apparatus to perform the steps of:

printing a received facsimile image by selectively using a first unit for color image printing and a second unit for high-quality color image printing; ~~and~~

controlling the facsimile apparatus to print, in the printing step, a received color facsimile image not by the second unit, but by the first unit;

selectively loading either of the first unit and second unit to the facsimile apparatus; and

storing a received facsimile image in a storage unit if the second unit has been loaded to the facsimile apparatus.

74. (Previously Presented) A computer program according to claim 73, wherein the first unit comprises a plurality of containers respectively containing cyan, magenta, and yellow printing agents, and the second unit comprises a plurality of containers respectively containing high-quality cyan, magenta, and yellow printing agents, suitable for high-quality image printing, which differ in density from the printing agents contained in the first unit.

75. (Previously Presented) A computer program according to claim 74, wherein the printing agents and high-quality printing agents are inks.

76. (Previously Presented) A computer program according to claim 74, wherein, in the printing step, the first unit includes a container containing black printing agent and the second unit includes a container containing high-quality black printing agents, suitable for high-quality image printing, which differ in density from the black printing agent contained in the first unit.

77. (Cancel)

78. (Cancel)

79. (Previously Presented) A computer program steps according to claim 74, wherein the first unit is capable of printing by using process black, and wherein the printing step uses the first unit for printing a received monochrome facsimile image, using process black.
